

BLOCKBUSTER

DISSOLVES AND REMOVES CEMENT, CONCRETE, MORTAR AND GROUT FROM DRAIN LINES

Acid Alternative Molecular Cement Dissolver for Drains

Ready to use - No dilution required

Non-fuming and low odour

Contains no harsh acids or alkalis

Non-flammable and non-corrosive to metals

Contains a powerful blend of inhibitors that protect metal surfaces during use

Blockbuster is a safer alternative to sulfuric, hydrochloric (muriatic), phosphoric, and hydrofluoric acids. It is also excellent for removing plaster, casting materials, scale, and other minerals from drains, sinks, fixtures, and plumbing.

Application: Pour undiluted solution into drains and allow to soak directly. Blockbuster begins to dissolve cement bonds within 10-15 minutes. In the presence of heavy build-ups, a longer set time (overnight), proportional to the cement thickness may be required. Follow with water rinse.

Recommended dosage amounts: 2" drain – 250 – 500mL,
4" drain – 500mL – 1 L,
6" drain – 1 – 1.5 L,
8" drain – 1.5 – 2 L

Application Tip: Always apply Blockbuster to a dry surface. Never apply to a hot or sun-baked surface. Blockbuster can also be applied as a foam or as a spray.
